Bug ID: 001

Title: Profile picture upload fails when uploading a large image file

Description: Users experience an issue when uploading a large image file as a profile picture. The upload process fails without displaying any error message.

Steps to Recreate:

1. Log in to the system using valid credentials.
2. Navigate to the "Profile" section.
3. Click on the "Upload Profile Picture" button.
4. Select a large image file (e.g., 5MB+) from the local machine
5. Click on the "Upload" button.

Actual Result:

The upload fails without displaying any error message. The image does not appear on the profile page.

Expected Result:

The image should upload successfully with appropriate compression if necessary.

Attachments:

Screenshots or video recording of the issue

Environment:

- **Operating System:** Windows 10
- **Browser:** Google Chrome 95.0
- **Application Version:** v1.2.3
- **Device:** Laptop

Severity: High

Priority: High

Title: Profile picture upload fails when uploading an image file with special characters in the file name

Description: Users experience an issue when uploading an image file with special characters in the file name. The upload process fails even when the image is valid. And displayed an invalid error message.

Steps to Recreate:

1. Log in to the system using valid credentials.
2. Navigate to the "Profile" section.
3. Click on the "Upload Profile Picture" button.
4. Select an image file with special characters in the file name (e.g., "profile@pic#.jpg") from the local machine
5. Click on the "Upload" button.

Actual Result:

An error message is displayed: "File upload failed. Please try again." even though the image is valid.

Expected Result:

The image should upload successfully without errors.

Title: Profile picture upload fails when uploading a non-image file

Description: Users experience an issue when uploading a non-image file as a profile picture. The application accepts a non-image file and didn't display an error message.

Steps to Recreate:

1. Log in to the system using valid credentials.
2. Navigate to the "Profile" section.
3. Click on the "Upload Profile Picture" button.
4. Select a non-image file (e.g., a .txt file) from the local machine
5. Click on the "Upload" button.

Actual Result:

The application accepts the non-image file but then crashes when attempting to display it as a profile picture.

Expected Result:

The application should prevent non-image files from being uploaded and display a user-friendly error message.
